

KATI-BLITZ®

Fibreglass pulling needle in dynamic crankcase

It goes where others do not go!

Effectiveness

The strength of fibreglass, combined with the flexibility of the guide head, gives the needle a dynamism that allows it to sneak into all sheaths:

- even very long
- even with elbows
- even tight-fit.

Supplied with two guide heads of different diameters (7 and 10 mm), based on the diameter and size of the sheath

Longevity

Thanks to the repair kit and its great length (30 meters).

It is important not to bend the needle and maintain a minimum radius of curvature of 30 mm.

A fibreglass of exceptional quality

Its resistance to push and pull exceeds 100 kg

No shape memory.

Diameter: 3 mm

With the crankcase, needles will no longer tangle

The needle is stored in the compact crankcase, from where it is unwound without effort.

Compact (300 x 250 x 65 mm) and lightweight (940 g).

Highly resistant to impacts, the crankcase is suited for site works and effectively protects the needle

Easy to carry and store thanks to its handle.

No rotating parts inside, so no maintenance

Central unit handy for storing all accessories

NEW

With the sock anchor, no need to splice

It is screwed instead of the guide head.

When it is retracted, the sock expands and wires can easily be introduced inside. Once the wire in the sock, the more you pull, the more the meshes of the sock tighten.

The wires cannot come out.

Another advantage: much thinner than a splice and is less likely to block the return sheath.

Suitable for a total diameter between 6 and 9 mm

Sold as an accessory.

Principles of use

- 1) insert the needle in the sheath
- 2) hook the electric wires to the needle
- 3) pull the wires inside the sheath

KATI-GRIP pull handle

It greatly increases your pulling strength and avoids injury.

To always have on hand, the KATI-GRIP is attached to the crankcase by a detachable carabiner.

Available accessories and spare-parts

- Lubricant special non-fat 200 ml (KBLUB200)
- KATI-GRIP pull handle (KBGRIP)
- Packet of 10 eyelets for hanging the wires (KB10OEIL)
- Pulling grip Ø 6 to 9 mm (KBCHAUSS69)
- Guide head Ø 7 mm (KBTETE07)
- Guide head Ø 10 mm (KBTETE10)
- Guide head Ø 13 mm (KBTETE13)
- Glue tube of 3g (KBCOLLE3)
- Pack of 5 tips + 5 connectors (KB5E5R)
- Spare needle (KBAIG330)

Le KATI-BLITZ (code KB330) includes:

- the fibreglass needle in the crankcase
- the KATI-GRIP pull handle
- 2 guide heads (Ø 7 mm and Ø 10 mm)
- 5 eyelets (to hang the wires)
- 1 repair kit (special glue, 5 threaded ends, 3 double connectors)
